

Visionary Software

LLC

INVESTMENT PROPOSAL

We build the way in.

A software studio **building for the world** — developing for the blind today, where the method is already proven three times over, and shipping professional audio tools and real client software besides.

Flagship product. Serato DJ Pro & djay Pro, playable by ear — working software in testers' hands today.

INVESTMENT PROPOSAL • 2026

LEROY ABRAHAM JUNIOR • FOUNDER

We build the way in.

A studio that **builds for the world**. Blind and low-vision users are where the company started and where its edge is sharpest today — but the same method reaches past accessibility: professional audio tools and real client software, built by the same studio.

01

Find the locked door

Where has a pro tool shut people out — by disability, price, or design?

02

Build the bridge

Ship the tool that truly gets them in — honest, reliable, accessible-first.

03

Own the niche

Become the default no competitor clones in a weekend; earn the moat.

04

Run it again

The same playbook on the next locked door — a DJ platform, a DAW, and broadcast software, three for three.

Three doors are already open — AccessBridge ships today, FLSpeaks is in active build, OBSSpeaks is feature-complete and entering testing. Beyond accessibility, the same studio ships the Visionary audio-tools line (Mastering Suite, Bus, Slice) and runs a working client software practice — real platforms delivered for a transportation company and two financial and enterprise-services firms.

The industry-standard tools are a locked room.

2 / 124

Of Serato's entire interface, a screen reader can read **two elements out of a hundred and twenty-four**. Access broke at v1.8 and was never restored.

Serato was screen-reader usable through version 1.7; the 1.8 interface rebuild broke that access, and Serato has never restored it.

— SERATO DJ PRO

Virtual DJ's custom skinned interface is not compatible with screen readers; blind users depend on a third-party workaround, not native support.

— VIRTUAL DJ

Don't make the **screen** readable. Get the **facts** out — and say them out loud.

01

Reads from the inside

Reads Serato's live internal state directly — deck, time, key, BPM, cues, effects, crates — and djay through the Mac's own accessibility system. Nothing guessed; if it can't read something, it says so.

02

Names the hardware

Plug in a controller and every knob, pad and fader announces what it does the moment you touch it — with zero setup, across 200+ controllers. A blind DJ could never map by sight; AccessBridge ships that knowledge built in.

03

Speaks, and drives

One clean voice — it can even speak through the screen reader the DJ already trusts — and it drives the software back: load a track, set a cue, sort the library, jump a beat.

FLAGSHIP — ACCESSBRIDGE

FULL PARITY · TWO HOSTS, ONE CONSOLE

Opposite starting points. One seamless experience.

SERATO DJ PRO — BUILT TO BE SEEN

Read from the inside

2 of 124 elements readable · no official way in

A small component rides safely **within Serato** and reads its real, live objects directly — read-only, with **no screen capture and no fake clicks**. Serato even names controls standalone, from AccessBridge's own IP-clean profiles.

DJAY PRO — NOW AT FULL PARITY

The same depth as Serato

Full console: Decks, Neural Mix, Sampler & Loops, Effects, Microphone

djay already publishes its decks, times and library to the Mac's accessibility system, and won a 2016 Apple Design Award for blind access. AccessBridge now runs at the same full depth on djay as on Serato — doubling the addressable platform market.

FLAGSHIP — ACCESSBRIDGE

SHIPPED — NOT A PROMISE

What works today.

- **Reads all four decks** — track, artist, BPM, key, time left, and the live pitched tempo.
- **Speaks effects, loops, beat-jumps, hot cues** — and the whole library and crate system.
- **Full djay Pro parity, plus Mic FX** — tempo-synced live vocal effects, 100+ presets, and a streaming-account control room (TIDAL, Beatport, Beatsource, SoundCloud, Apple Music) — all recently shipped.
- **Names any supported controller on touch** — 200+ controllers, both hosts, no setup.
- **Drives Serato and djay** — loads tracks (incl. streaming), sorts, searches, files & removes, works the online catalogue.
- **Quiet menu-bar app, full keyboard console** — in testers' hands now.

Not something a competitor clones in a weekend.

37,000+

lines of Swift / C++, built and rebuilt

719

automated tests — every claim proven on real hardware

0

official APIs — no door was left open on purpose

100%

original, IP-clean controller data — lifted from no one

Months of reverse-engineering: reading Serato's private state without disturbing the app or the music, wall after wall climbed or honestly ruled out. **That hard-won knowledge, done reliably and honestly, is the real moat** — and it self-repairs on every Serato update, finding the vendor's own internal classes at runtime instead of hard-coding them.

The same method just opened a full DAW: **FLSpeaks**.

The same bridge as AccessBridge, solving a harder problem: FL Studio 2025 sandboxes its own embedded Python. FLSpeaks routes its live bridge over MIDI SysEx instead — a genuinely novel discovery. Crown feature: it speaks **FL Studio's own hint messages** verbatim, plus 461 commands. Verified live: 597 named parameters read and driven end to end.

“FL Studio cannot be used with screen readers.”

— IMAGE-LINE SUPPORT KNOWLEDGE BASE · THE GAP IS STILL OPEN
IN 2026

One method. Two doors — and a pipeline.

FL Studio ranks first worldwide in DAW search interest, inside a top-3 field holding roughly 58% of the whole market. REAPER (with the free OSARA extension) and Apple's Logic Pro are usable by blind producers; FL Studio and Ableton Live are not — **FLSpeaks would be the first for FL Studio**. Demand is real and organized — AppleVis, ReaperAccessible, BlindProducers.org. One method opened a DJ app, then a full DAW: **Visionary is a repeatable accessibility company with a pipeline, not a single app.**

Fixed at the source: OBSSpeaks.

OBSSpeaks

OBS STUDIO, USABLE BY EAR · ZERO SETUP

OBS Studio is the de facto standard for streaming — even its biggest rivals are built on it. macOS won't let one app label another, so the only route in is patching OBS itself: 35 patches, ~11,800 lines at the source, not a fork. A 7-tab console with full keyboard coverage, an accessible peer for canvas position and picture quality.

OBS's own accessibility thread admits no VPAT, no one with the skills to pursue one; the bugs stay open for years.

— OBS STUDIO GITHUB DISCUSSION #6192 ET AL.

Open source. Fixed at the source.

Because OBS is open source, accessibility can be fixed the way OSARA opened REAPER — upstream, not bolted on. OBSSpeaks is feature-complete and entering its first tester cohort, already running the exact tester infrastructure AccessBridge proved in production: a health beacon, a self-verifying updater, one-keystroke feedback, and a 15-chapter narrated masterclass, recorded before the first outside tester ever opens the app.

One studio. Software for anyone who needs it done right.

01

Studio audio tools

Visionary Mastering Suite, Bus, and Slice — real, shipped professional audio-engineering tools built for any producer or engineer, sighted or not. Bus ports the full mastering-suite signal chain into a real-time VST3/AU plugin, parity-tested to -130 dBFS against the original engine, with 112 baked presets.

02

Real client software

A working client practice alongside the products: a three-app rider/driver/dispatch platform for a real transportation company, and full marketing and e-commerce platforms for two financial and enterprise-services firms — proof the studio ships professional software for any business.

03

One engineering discipline

The same real-time-signal-processing craft — get the true state out, process it honestly, hand it back cleaner — powers all three lines. Accessibility is where Visionary Software started; it is not where the company stops.

Overdue, underserved, and right on time.

2.2B

at least 2.2 billion people live with a **vision impairment** (WHO); roughly 43 million of them blind. Access is dignity and livelihood, not charity.

2025

The **European Accessibility Act** has been in force EU-wide since June 2025; US DOJ ADA Title II sets the same bar by 2027/2028 — amid 3,117 federal web-accessibility suits in 2025, up 27%.

400%

Disabled founders are cited as up to **400% less likely to secure investment** than peers — broken pattern-matching, not weaker businesses. A gap dedicated capital is only now closing.

We build for the world — blind is where it starts.

Captions, voice control and screen readers all began as “for a few” and became “for everyone.” The same engine that names a controller by ear is a hands-free layer for any professional — and the same studio already ships tools for sighted producers and clients too. The assistive-technology market alone is forecast to reach \$31.22 billion by 2030.

THE FOUNDER

THE MAKER

Credibility no engineering team can buy.

Leroy Abraham Junior

PRODUCER • ENGINEER • DRUMMER • LIVE-SOUND • DJ •
STREAMER

A blind producer, mix & mastering engineer, drummer, live-sound engineer, DJ, and streamer — with production credits alongside Blind Fury and DrummaBoy.

He didn't commission this from a lab. He built the things he needed, because he is exactly the user each one is for — three times now.

He also runs a working client software practice — real platforms delivered for a transportation company and two financial and enterprise-services firms — engineering range that reaches well past his own lived experience. The person who feels every missing detail is the person designing it.

The proof is **already built** — alone, on my own dime.

Months

full-time and unpaid, across all three — before asking for a cent

44,000+

lines of Swift, C++, and Python across two codebases

35

patches hardening a third, rebased clean onto stock OBS

\$0

outside funding to date — entirely self-funded, three times over

Built on my **own 2021 MacBook Pro M1**, with test hardware bought out of pocket, and every feature proven on real gear. No team, no grant, no runway — just the work, three times over.

I'm not asking you to bet on an idea — the proof is already built, three times, on my own dime. The \$450,000 is fuel for a fire that's already lit.

Raising \$450,000 for Visionary Software LLC.

\$450K

An **18-month pre-seed** — one founder, full-time — to ship AccessBridge, FLSpeaks, and OBSSpeaks to a stable 1.0, and let the founder build the company on a genuinely comfortable, sustainable runway instead of a below-market stipend.

“All I own today is a 2021 MacBook Pro M1 and a dream.”

— LEROY ABRAHAM JUNIOR, FOUNDER

The playbook: find where the industry **locked people out**, build the bridge, own the niche — then run it again. **Three doors are already open; this raise is what it takes to hold them open and build the next ones.**

Where the \$450,000 goes.

\$450,000

18-month pre-seed · solo founder, full-time
“a 2021 MacBook Pro M1 and a dream”

Founder runway

~\$8,300/month, 18 months — a real, sustainable living wage, not a below-market stipend

\$150,000 33.3%

Contract engineering

~900 hours at \$90-100/hr blended rate: ~\$45,000 FLSpeaks bridge hardening, ~\$45,000 OBSSpeaks accessibility gaps

\$90,000 20%

Ship AccessBridge 1.0

~\$2,000 signing/notarization, ~\$14,000 Windows port & HID/Pro-DJ-Link, ~\$4,000 license-server hosting

\$20,000 4.4%

Ship FLSpeaks 1.0

~\$15,000 piano-roll read/write, ~\$8,000 per-clip playlists, ~\$12,000 notarized distribution

\$35,000 7.8%

Ship OBSSpeaks 1.0

~\$12,000 level-meter/preview-canvas peer, ~\$8,000 end-to-end verification, ~\$5,000 tester support

\$25,000 5.6%

Continued on the next slide: hardware, QA & docs, legal & IP, launch, and contingency — five more lines to \$450,000 total.

Where the \$450,000 goes, continued.

Hardware & test rigs, all three ~\$12,000 AccessBridge rig, ~\$9,000 FLSpeaks rig, ~\$9,000 OBSSpeaks rig		\$30,000 6.7%
Accessibility QA, docs & onboarding ~\$15,000 paid betas, ~\$8,000 masterclasses, ~\$7,000 WCAG 2.2 audits		\$30,000 6.7%
Company formation, legal & IP ~\$1,500 LLC + registered agent, ~\$7,000 four trademarks, ~\$1,500 license/pilot agreements		\$10,000 2.2%
Launch, marketing & community, all three ~\$5,000 hosting/promo, ~\$10,000 community ad budget, ~\$10,000 demos/content		\$25,000 5.6%
Contingency A reserve sized for three concurrent products — a controller, DAW version, or OS change that behaves differently than spec		\$35,000 7.8%

What \$450K delivers: AccessBridge, FLSpeaks, and OBSSpeaks all shipped to a stable 1.0 · a founder who can build at a pace that lasts · a company formed and trademarked four times over · first revenue on three fronts.

First revenue is direct — the bigger doors open next.

ON NOW • DIRECT

Licenses across three communities

Sell AccessBridge, FLSpeaks, and OBSSpeaks straight to the blind DJ, producer, and streamer communities that have been asking for them — a real, identifiable audience inside a WHO-estimated 43 million blind and 2.2 billion vision-impaired population.

ENDORSE & BUNDLE

Technology license

Serato, Algoriddim, or Image-Line bundle or endorse it — the same motion that grew Accessercise, a comparable disability-tech company, into a £600,000-backed business.

ALL THE WAY

License or acquisition

Exclusive license or acquisition for the company as a whole, into a global assistive-technology market forecast at \$31.22 billion by 2030.

STRONGEST OPENING

A paid pilot with a live demo — a blind creator running your flagship, on stage-standard hardware, with zero setup. See it once and the case makes itself.

VISIONARY SOFTWARE LLC

From me, to the world.

Flagship product: AccessBridge — Serato DJ Pro & djay Pro, playable by ear. Three doors open; building for the world.

Built by one founder, by hand — every line, every test. The investors who join now aren't a cap table — they're the family that opens the first door, and every door after.
